R06 · Log of signals and evidence

What it is for. Distinguish observation, source and interpretation.

When to use it. Before making a decision or updating the corresponding product. You can use a spreadsheet, a document or a notebook; no software licences are needed.

How to use it

1. Start with the real decision or question you need to resolve and set a cut-off date.

2. Fill in only what can be verified; write NOT VERIFIED when data is missing.

3. Separate observed facts, hypotheses and implications, and name a reviewer.

4. Keep the original version and record relevant changes when you update it.

YOUR WORK

Version: _____ Cut-off date: _____ Owner: _____

ID	Date	Original source	What it claims	Verified evidence	Interpretation	Alternative	Relevance	Next test

Final check

☐ Is it clear which decision or need it serves?

☐ Can the evidence be located, and is it dated?

☐ Are uncertainties and limits made explicit?

☐ Can someone else repeat or review the work?

Mistake to avoid

A claim repeated by five portals that copy the same note does not amount to five independent pieces of evidence.

FICTIONAL EXAMPLE · NOT YOUR CONTENT

Company A case (educational simulation). A fictional news item reports a pilot of industrial thermal storage. Fact: a pilot was announced. Hypothesis: the technology is close to scale-up. Alternative: it is an exploratory demonstration.

entirely fictional case. The tools are for educational purposes; they do not represent an audit or certification.
